Education

Bursa Technical University Expected Jun 2025
Bachelor of Science in Computer Science (Current GPA: 3.75 / 4.00) *Bursa, Turkey*

Bursa Technical University 2020-2021
English Preparatory at Bursa Technical University (GPA: 4.00 / 4.00) *Bursa, Turkey*

Projects

Diet Tracker App for Desktop and Mobile | *Source Code*| *Dr. Öğr. Üyesi Volkan ALTUNTAŞ*
- Diet Tracker is a cross platform project written in flutter and C#. The aim of the project is to ease the communication between dietitians and patients.
- **Modules in Application**: Instant messaging between dietitian and patient, sending and receiving weekly diet list, quiz solving and scoring, ..., etc.
- **Technologies and Languages Used**: Flutter, C#, Firebase Real Time Database.

Cnn Classification | *Source Code*| *Doç. Dr. Erdem YAVUZ*
- This project performs image classification on the CIFAR-10 dataset using a Convolutional Neural Network (CNN).
- **Features**: Data Preprocessing; Includes resizing images, normalization, and data augmentation techniques. Model Architecture; Comprises a multi-layer CNN structure equipped with dropout and batch normalization layers.
- **Technologies and Languages Used**: Python, Jupyter Notebook

Game reviews website | *Source Code* | *Prof. Dr. Turgay Tugay BİLGİN*
- This project displays reviews, scores and details of the games pulled from the database. Developed the backend logic and functionality using PHP.
- **Technologies and Languages Used**: Bootstrap, JavaScript, PHP, MySQL

Basic Sentence Generator with LSTM | *Source Code* | *Dr. Öğr. Üyesi Seçkin YILMAZ*
- It is a sentence generation project to learn the basic structure of the LSTM algorithm, the background math and the engineering behind it.
- **Technologies and Languages Used**: Python, Jupyter Notebook

Analyse of NS3 simulation with Larowan | *Source Code*| *Doç. Dr. İzzet Fatih ŞENTÜRK*
- Developed a comprehensive traffic simulation using SUMO (Simulation of Urban Mobility) and NS3 (Network Simulator 3) to evaluate the performance of LoRaWAN.
- **Technologies and Languages Used**: C++, LoRaWAN, Ns3, SUMO

Experience

Canovate Ballistics July 2024 – Present
AI Engineer *İstanbul, Çekmeköy*
- Working on image processing, object detection, and designing implementing server-client architectures for both live and offline data transmissions.

Research

- **2209-A University Students Research Projects Support Program**
  The project, which was conducted in collaboration with two colleagues, was submitted for consideration under the 2209-A University Students Research Program.

Technical Skills

Programming Languages: Python, Flutter, C/C#, Java, PHP,Javascript
Technologies: TensorFlow, PyTorch, Scikit-learn, Keras, Deep Learning, YOLO, SQL, Bootstrap, Node.js, Linux, Git , MySQL
Languages: English (B1+)
